

AI Challenge

*From ambition, to real application.
For good.*

The 10-week AI challenge

Hands-on, applied to your work

Practical results

Five things every participant takes home

01 Your own AI assistant

Set up, tuned to your role, and used every day. Not just a login.

02 A tested toolkit

Tools you have tried yourself on real work, instead of picked on vendor claims.

03 Real workflows, improved

Tasks from your own job made faster or automated by week 10.

04 Capability built in-house

Reskilling your people is faster and cheaper than hiring new AI talent.

05 A habit that compounds

A simple loop for continuous improvement, plus a shared library of what works.

Two ways to run it

Tailored: designed around one company's work and goals.

Open: employees sign up and work alongside peers.

Program information

When

Mondays 15:00 - 16:00. (Optional discussion until 16:30)
6. November - 25. January, excluding 28. December.

Where

Online. Sessions will be recorded.

Testimonial

«We tested different tools, applied them to practical tasks, and shared ideas with colleagues. With AI in full revolution, having a guide to cut through the chaos was invaluable.»

Real Case Output

The Credit Note Assistant - «A participant deployed a working AI web app (Google AI Studio / Gemini) that turns a plain-language business case into a structured draft credit note, with human review built into the flow.»
